Summary

Master Graduate *Computational Biologist* from University of Trento, with background in Bioinformatics. Skilled in R and Python programming for data analysis and implementations in biological and medical scenarios. Experienced in Bioinformatic and NGS analysis, data manipulation, statistical modeling, image processing, ML, DL, and data visualization. Strong communicator with experience in teamwork and standalone projects. Developing aptitude and adaptiveness for novel arguments and topics. Strong interest in bridging the gap between computational methodologies and biological insights, to bring significant clinical impact.

Education

Master of Quantitative and Computational Biology (QCB)

University of Trento

09/2023 – 03/2026

Trento (TN), Italy

- Focus in integrating notions and concepts derived from Data Science, Biology, Statistics and Informatics to biological and biomedical research.
- Combinations between theoretical courses and hands-on projects regarding Bioinformatics, System Biology, Evolutionary Algorithms, R&D.
- Shift of interest in coding and programming, with many interactive laboratories to further practice the acquired knowledge. (Due to background inclination)

Bachelor of Bioinformatics.

La Sapienza University of Rome

09/2020 – 07/2023

Rome (RM), Italy

- Introduction to general and more complex arguments and concepts related to both Biology, Chemistry, Molecular Biology, Data and Computer Science.
- Greater focus on theoretical notions concerning Biology and its derived disciplines, with lower amount of coding applications and projects.

Skills

- Biostatistics
- Computational modeling
- Next-generation sequencing analysis
- Programming in biology (Python, R, Linux)
- Bioinformatics tool development
- Molecular biology computational tools
- Image Analysis
- Teamwork & International Communication
- Bioinformatics research methodologies
- Machine learning in bioinformatics
- Genomic data analysis
- R&D in computational biology
- Statistical software proficiency
- Algorithm development in biology
- ML/DL architecture
- Evolutionary algorithms
- Biological data integration
- Biological databases
- Data visualization in biology
- Quantitative data analysis in biology
- Gene expression analysis
- Mentoring

Professional Experience

Academic Tutor

La Sapienza University of Rome

10/2021 – 06/2022

Rome (RM), Italy

Helped students review and learn concepts related to Biology, Molecular Biology, Bioinformatics, Chemistry, Biochemistry. Guided students and professors through the right bureaucratic channels for different type of operations.

Projects

DL-based tool for cardiomyogenic prediction

05/2025 – 03/2026

Master Thesis

Developing a deep learning-based predictive tool for cardiomyocyte differentiation. The project involves designing and training Long Short-Term Memory (LSTM) and Gated Recurrent Units (GRU) networks to process time-series data from 2D fluorescence images. The goal is to enable early-stage prediction of differentiation outcomes in human induced pluripotent stem cell (hiPSC) cultures, improving efficiency and resource allocation (University of Trento).

Gene Expression uncovering in NSCLC

02/2023 – 05/2023

Bachelor Thesis

Performed Differential Gene expression on transcriptomics data analysis from Non-Small Cell Lung Cancer in non-smoking patients, utilizing R/Bioconductor packages for data normalization, statistical modelling, and identification of key mutational weak points, followed by GO/KEGG enrichment analysis to isolate relevant clinical biomarkers (Sapienza University of Rome).
